JULY 2026 · SCHNEIDER ELECTRIC

PredictX

Powering Predictive Intelligence

A campus-to-industry innovation challenge on predictive energy savings, predictive failure detection, predictive replacement, and AI-powered analytics for data centers and switchgear.

General

Why PredictX

Bridging academic research and Schneider's predictive-intelligence roadmap

Untapped Talent

India's top engineering campuses have strong AI/ML and power-systems talent that rarely engages with real industrial problems.

Predictive is the Frontier

Energy efficiency, failure prevention, and asset replacement are shifting from reactive to AI-driven predictive models.

Two-Way Value

Institutions gain live industry problem statements; Schneider gains fresh solutions, validated talent, and a stronger university pipeline.

General

The Three Themes

Teams pick one theme and build a working prototype + business case

Energy Intelligence

"From Data to Decisions, and Protection to Prediction"

Vision: Transform electrical infrastructure from reactive assets into intelligent systems that can sense, predict, decide, and act autonomously.

Focus Areas:

- Self-healing electrical infrastructure
- AI-powered protection and fault prevention
- Predictive maintenance and asset health
- Autonomous grid and load optimization
- Digital twins and operational intelligence
- AI-driven decision support for operators

General

The Three Themes

Teams pick one theme and build a working prototype + business case

Speed of Innovation

"Agentic Engineering for the next gen Electrification"

Vision: Accelerate product development and innovation through AI agents that transform engineering, software development, and lifecycle management.

Focus Areas:

- Engineering copilots
- Requirements-to-code/test automation
- AI-driven system engineering
- Compliance automation
- Knowledge management
- Product lifecycle optimization

General

The Three Themes

Teams pick one theme and build a working prototype + business case

Sustainability

"Intelligent Energy Ecosystems for a more sustainable future"

Vision: Use AI and connected technologies to maximize efficiency, reduce carbon impact, and enable sustainable living and operations.

Focus Areas:

- Energy optimization
- Carbon reduction
- Connected homes
- Building intelligence
- Renewable integration
- Occupancy-driven efficiency
- Smart energy consumption

General

Program Structure Funnel

Six stages over 10 weeks — from campus launch to final leadership pitch

1

Launch & Registration

Hackathon launch,

2

Problem Selection

First selection of problem statements & groups

3

Team Selection & Mentorship

15 teams selected, mapped with SE Electrifiers

4

First Pitch & Top 5

Pitch to SE Sr. Managers, top 5 teams chosen

5

Final Prep

10 days to prepare the final pitch

6

Final Presentation

Top 5 present to SE R&D Leaders, top 3 selected

Stage 1 & 2 — Launch and Screening

24th July – 21st August

STAGE 1 · LAUNCH

Wk 1–3

- Hackathon kick off
- Registration link to be shared with all eligible students
- Deadline to form groups and close registration: 7th August

Key Date: **7th August — Registration Closes**

STAGE 2 · SCREENING

Wk 4–5

10th – 21st August

- First selection of problem statements and student groups — narrowing the full registrant pool down to a working shortlist ahead of team selection in Stage 3.

Stage 3 & 4 — Mentorship and First Pitch

24th August – 14th September

STAGE 3 · MENTORSHIP

Wk 6–7

24th August – 4th September

- 15 teams get selected to advance
- Teams mapped with SE Electrifiers
- Structured mentorship sessions with Electrifiers begin

Note: *Electrifier mentors — to be determined (TBD)*

STAGE 4 · FIRST PITCH

Wk 8

11th SEPTEMBER

1st Pitch of Teams to SE Sr. Managers (Panel — TBD)

14th SEPTEMBER

Selection of Top 5 Teams

Stage 5 & 6 — Final Preparation and Presentation

21st September – 30th September

STAGE 5 · FINAL PREP

Wk 9

21st – 29th September

The top 5 shortlisted teams receive 10 days of dedicated time to refine and prepare their final pitch, incorporating feedback from the SE Sr. Manager review round.

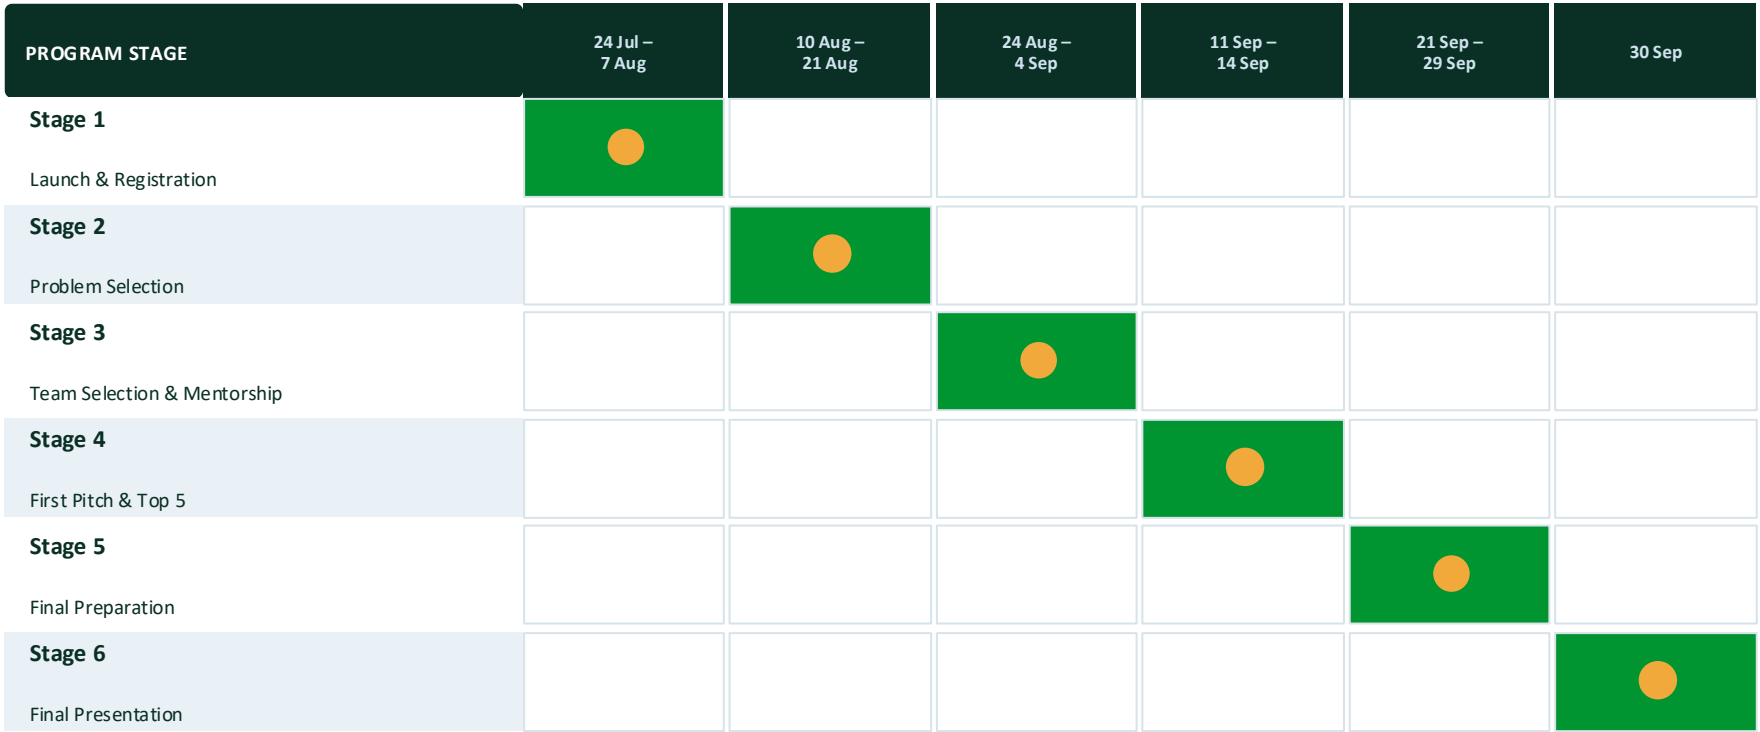

STAGE 6 · FINAL PRESENTATION

30th September

- Final presentation event held at close of the 10-week program
- Top 5 teams present directly to SE R&D Leaders
- Top 3 teams selected as program winners

10-Week Program Timeline

At-a-glance view of all six stages across the calendar

Team Formation & Mentoring

Structured support so every team has the right mix of skills and guidance

Team Formation

- Teams of 2–4 students, cross-disciplinary (CSE / EE / ME encouraged)
- Self-formed teams register against a chosen theme
- Open mixer session for students seeking teammates
- Each team assigned one faculty mentor + one Schneider technical mentor

Mentoring Cadence

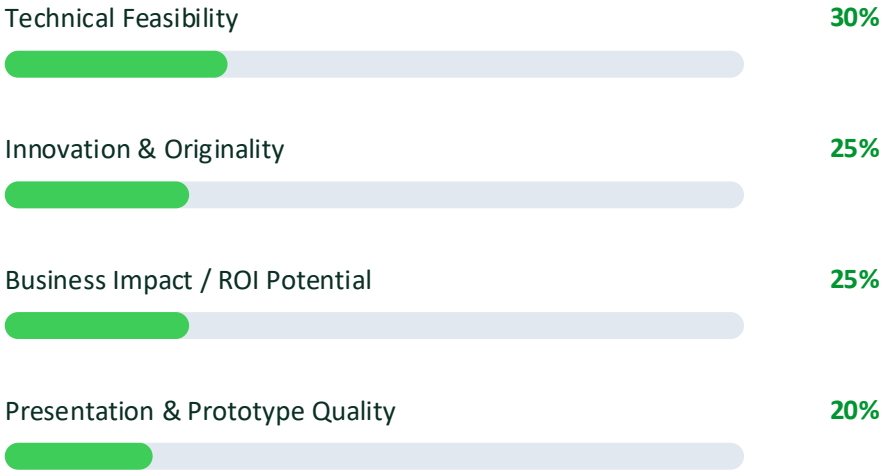

- Week 2: Problem framing & data access workshop
- Week 3-4: Weekly 30-min check-ins with Schneider mentor
- Week 5: Mid-point technical review + course correction
- Week 6: Mock pitch & feedback session before evaluation
- Faculty mentor available throughout for academic guidance

General

Evaluation & Final Selection

A transparent, two-stage jury process

Evaluation Criteria

Stage 1: Mid-Review

Schneider + faculty jury shortlists teams to continue to final pitch (Week 6-7)

Stage 2: Final Pitch

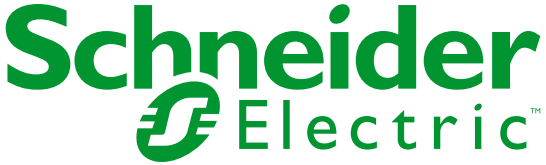

Senior leadership jury at final demo day. Winning team is offered an internship at Schneider Electric to build out their proposed solution.
